

QUIET RIDE

Quiet Ride Solutions offers Acoustishield, a sound deadening package designed to make a night and day difference in

cruising quality by shutting out unwanted road and driv-

eline noise along with extremes of heat and cold. Installation is simple because Acoustishield consists of pre-cut, ready to install aerospace material designed to keep noise, heat, and cold out while maintaining quiet along with a constant temperature inside. Another important ally in the war on noise, heat, and cold is Dynamat, also from Quiet Ride Solutions, which sticks to steel surfaces to dampen noise and vibration.
