

Wood Floor Weather Barrier Kit

The Model A has always had a problem with heat radiating up from the floorboards. Mainly it is from the exhaust system. There have been some bolt on heat shields offered to combat this problem, but Quiet Ride Solutions has developed a new product that multitasks. Quiet Ride Solutions is the manufacture of the firewall insulation product that was used on the Model A Times sedan and many cars in the hobby. They offer complete insulation and sound deadening products specifically for Model As and cut to specific body applications.

The Wood Floor Weather Barrier kit is designed to insulate and protect the underside of wood floor panels of Model As (allowing the interior face to be finished to furniture like or original which ever the owner chooses. The barrier seals and prevents the wood from absorbing moisture kicked up from wet road conditions. It also reflects radiant heat from exhaust systems and roadway away from the floor surface.

The kit comes with pre-trimmed weather barrier insulation panels, spray adhesive and a roll of aluminum foil tape.

The floor boards need to be clean and dry before starting the application. Installation instructions are very clear and easy to follow. Only tools needed are a sharp knife, felt marker and a roller to smooth out any wrinkles in the material.
