

Made Right - To Fit Right -- To Stop Engine Heat

Your first line of defense against engine noise, vibration and heat is the Firewall Insulator panel--the barrier between the engine bay and the passenger cabin. Quiet Ride Firewall Insulators fit like a glove because they match the contours of the stock steel firewall. There are no gaps to allow noise and heat to move into the passenger cabin.

All of our street rod firewall insulator panels are manufactured from original panels supplied to us from street rod body manufacturers. Each panel is molded from a leather-grained ABS material and vacuum formed from our own molds and include Heat Shield insulation. Firewall Insulators are blank (no holes) and include instructions for cutting and installation. Firewall panels can be installed with contact adhesive or by using our Street Rod Firewall Mounting Pin Kit.

AcoustiSHIELD™

Roof to Road Solutions to Control Automotive Noise, Vibration and Heat

50% Discount on New Vehicle Patterns

We are looking for vehicles to add to our auto insulation library. Bring your car to our shop to pattern and get a 50% discount on a complete AcoustiShield Insulation Kit.

Call 209-942-4777 for details and an appointment.

If you are restoring or building a custom vehicle, now is the time to insulate the interior to give yourself a cool and quiet ride down the road. Most vehicles in years past had little or no factory insulation. We learned to live with the noise then, but you don't have to live with it now.

Our two-stage AcoustiSHIELD Automotive Insulation kits cover the entire interior of the passenger cabin--from the firewall to the tail lights--and will reduce interior noise up to 50 percent and isolate mechanical and environmental heat sources.

Each kit includes Dynamat damper material and Heat Shield, spray adhesive, and seam tape, as well as illustrated installation instructions--everything in one box to do the job right.

Firewall Mounting Pin Options For Older Cars and Trucks

American Cars and Trucks used a wide variety of mounting pins, clips, buttons and screws to attach the firewall insulator to the interior of the steel firewall bulkhead. Clean up and reuse your original mounting pins if you have them. We offer the following mounting pins and information based on what we have been able to find available.

Early Ford Firewall Mounting Pins

These all steel firewall mounting pins are a reproduction of the originals. They are available in a 3/4 inch length (Long) and in a 1/2 inch length (Short). The long pins work best for the early production cars and trucks. The Short pin works best for the 1942-48 cars and 1940-47 Trucks. The long pins may have been used in Ford cars as late as 1954. The short pins may have been used in Ford Trucks through the mid 1950s.

- Ford 3541-MPL 1935-41 Ford Firewall Mounting Pin-Long \$3**
- Ford 4147-MPS 1941-47 Ford Firewall Mounting Pin-Short \$3**

GM Firewall Mounting Plugs

General Motors started using a plastic firewall mounting plug to attach the insulator in the mid 1950s--1955 for Trucks and 1957 for Cars. These plugs are still used in GM vehicles today.

- GM 5500-MP 1955 to Present General Motors Mounting Plug \$3**

Street Rod Mounting Pins

With this new mounting pin kit, you can weld up your firewall mounting holes and install any of our insulators for that "smoothie look." Kit includes nine pin-sets and installation instructions.

- SRMP Street Rod Firewall Mounting Pin Kit \$34**

Universal Mounting Pins

If your original firewall mounting pins are missing or damaged beyond repair, these universal pins may be a solution. They are a plastic "Christmas tree" type pin that will fit most 5/16 inch holes. Kit includes 10 pins.

- UMPS-10 Universal Mounting Pin Set \$20**

Universal Wire Cap

A variety of car and truck manufacturers in the 1930s used a wire cap retainer to mount the firewall insulator. These are still available in a Long (1/2 inch) and Short (1/4 inch) variety and have a 1/2 inch button head that can be painted. To match the firewall color.
