## Roof to Road Solutions to Control Passenger Cabin Noise, Vibration and Heat

Introducing a multi-stage, automotive insulation and sound dampening system to give older MG cars the "quiet riding comfort" found in today's new cars. AcoustiSHIELD kits are designed with current "state-of-the-art" auto acoustic technology to insulate and control the noise, vibration and heat in the passenger cabin. Kits are pre-cut, ready to install and come with easy-to-follow illustrated instructions - everything you need to do the job right.

## Turn Your MG into "Quiet Riding Comfort"

### Everything in One Box to Do the Job Right!

Pre-Cut, Ready To install Kits are Year, Make and Model Specific and include:

- AcoustiShield Damper Pads
- Heat Shield Barrier Insulation
- Spray Adhesive •Seam Tape
- Illustrated Instructions

## Product Application Codes and Price Sheet

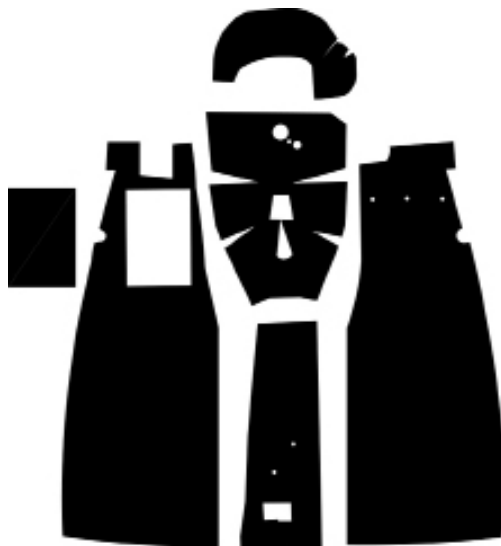

Cowl/Firewall Insulator Note:

### 1949-53 MG TD Roadster Complete AcoustiShield Insulation Kit MGTD 4953-RAK

These cars came from the factory with a thin, burlap backed carpet insulation on the firewall, which did little to stop engine heat and noise. The QRS firewall pad is constructed with vinyl mat material over HeatShield insulation, which significantly insulates the cockpit from engine noise and heat. Carpet can be glued to the rubber surface.

## A Roof to Road Solution to Control Passenger Cabin Noise, Vibration and Heat™

### AcustiSHIELD Product Description

AcustiShield is a two-stage thermal acoustic automotive insulation product designed to control Noise, Vibration and Heat—the three major issues that affect passenger cabin comfort. Kits include pre-cut, ready-to-install AcustiShield damper pads and HeatShield Barrier Insulation panels which are packaged separately for easy installation. Kits come with uniquely illustrated installation sheets, spray adhesive and seam tape.

Complete Acoustic Kits insulate the **Cowl, Floor, Roof, Trunk Floor, Doors and Body Panels**, which includes the seat divider, package tray and rear wheel wells. The installation of a complete AcustiShield kit typically will reduce passenger cabin noise by 12 to 17 decibels. To put this in perspective, a 10-decibel reduction is a 50 percent reduction in noise that the human ear can easily detect. Barrier insulation will reduce radiant heat by as much as 25 degrees.

### AcustiShield is a Two-Stage Process

**Stage-One of the AcustiShield** process is the application of small pre-cut AcustiShield damper pads and strips to auto body sheet metal to greatly reduce the vibration and noise produced by these panels from entering the passenger cabin.

**Stage-Two of the AcustiShield** process is the application of pre-cut HeatShield Barrier Insulation panels to the auto body sheet metal to encapsulate any remaining vibration/noise and to thermally insulate the vehicle.

**WARNING**  
Cancer and

## Expanded NVH Reference Information:

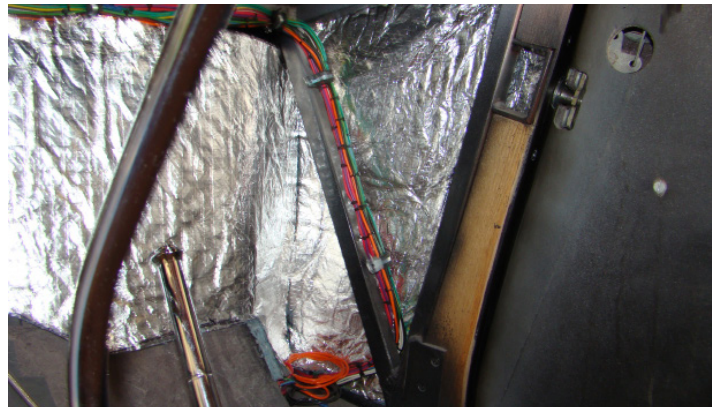

Cars and trucks make and/or absorb noise, vibration and heat (NVH) from multiple directions--including internal and external air-borne noise, structure-borne noise as well as radiant heat. NVH factors to consider:

- Engine NVH travels back from the front of the vehicle through the firewall and cowl.
- Wheel well trunk and rear body panel NVH travels forward through the seat divider and package tray panels.
- Roadway radiant heat, often exceeding 140 degrees, rises through vehicle floor pans.
- Rumbling performance exhaust systems and transmission/drive line harmonics also rise through vehicle floor pans.
- Direct heat from the sun penetrates the roof of the vehicle.

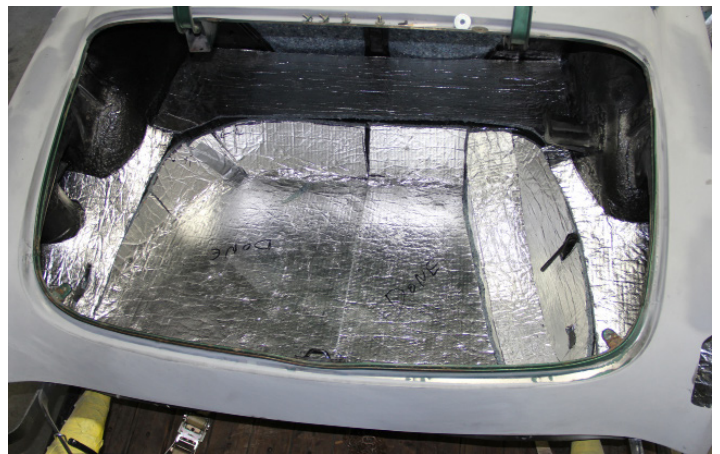

All of these influences “Apex” in the middle of the passenger cabin at ear level.

Add the noise produced by the sound system; the air rushing through the vents from the HVAC system; and a normal conversation builds into a “shouting match” between the driver and passenger to overcome the “harmonic drone” of vehicle mechanics.
